PREPARE FOR **HURRICANE SEASON**/WINTER STORMS

During the Fall, it is essential to Crown clean your trees to prevent branches from breaking when the wind, snow and ice hits.

- Deadwooding is the removal of dead branches, which need to be removed immediately to prevent property damage and bodily injury
- Thinning opens the crown of the tree to lessen wind resistance and removes unnecessary and obstructive branches
- Trimming/Elevating in the Fall is vital in keeping branches from interfering with your roof, walkways, and driveways

This is the best time to identify dying, dead, or uprooted trees before a storm creates damage. When in doubt, let Ed's Tree Service inspect your property to ensure safety and maintain the health of your trees.
