

A photograph of a large, mature tree with a significant trunk split and a large branch broken, leaning against a red house. The tree's trunk is heavily damaged, with a large section of the bark and wood missing, revealing the inner structure. The broken branch is leaning against the house, and another large branch is lying on the ground in the foreground. The house is red with white trim around the windows and doors. A blue trash can and some outdoor furniture are visible in the background.

### PROTECT YOUR TREES FROM SUMMER STORMS

- The recent nor'easters have left many trees damaged, let our professionals inspect your property to ensure safety and maintain the health of your trees.
- Thinning opens the crown of the tree to lessen the wind resistance and is important to do before the next summer storm hits.
- It is imperative to remove dead trees and branches to avoid property damage and/or bodily injury.
- The Emerald Ash Borer epidemic is spreading, have your Ash tree inspected immediately as it may require removal.

### EMERGENCY STORM SERVICE

- We specialize in crane-required tree removals and insurance claims.
- Our expert crane operators and crews take great care to protect and preserve your property.
- The claims process will be a breeze with the assistance of our thorough estimates and helpful team.
